

AI Engineer

Ales Martan

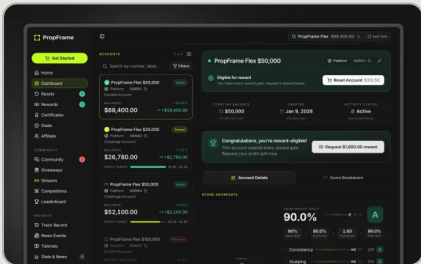

ales.martan@gmail.com · alesm.dev · github.com/alesmartan

Czech, working worldwide from UTC+7

PROFILE

AI engineer with an eye for detail and the hands to build it. I make interfaces feel right, then ship the whole product underneath, front to back. Years of creative direction behind the design decisions, agents and automations behind the pace.

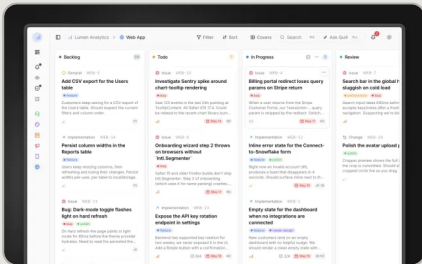

SELECTED WORK

PropFrame

propframe.tech

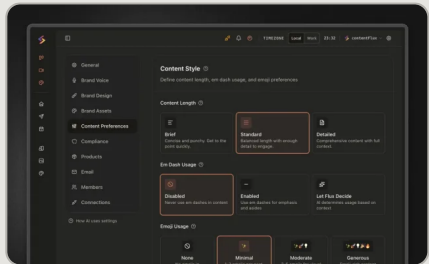

Everything a prop trading firm needs except the prop tech. Trader dashboard, staff console and the commerce around them, direct or white-labeled into a prop tech's platform.

Hey Quill

heyquill.io

Project management for people and AI agents. The board is the source of truth; cards double as briefs agents pick up and work.

ContentFlux

contentflux.app

An all-in-one MarketingOS for multi-channel content. Brand-trained AI writes it, you post everywhere in one click.

EXPERIENCE

PropFrame

2026 · Independent · Remote

The product layer a prop trading firm runs on, sitting on top of the firm's prop tech or white-labeled inside a provider's platform.

Founder & Developer

Jan 2026 – Jul 2026

- Sole developer on the whole platform: trader dashboard, staff console, and the commerce and marketing layer around them.
- Reads the firm's prop tech over API, so the firm keeps its own data and providers whether it trades futures, CFDs or crypto.
- Ran a live firm in production, from first evaluation through payouts, community, affiliates and support.

AI Technologies Co.

2025 · Contract · Remote

A fintech venture studio spanning trading tools, payments and digital agencies.

AI Solutions Specialist

Sep 2025 – Dec 2025

- Built a company-wide AI agent wired into the CRM, so any team could ask for what they needed, from marketing statistics to finance data, and get an answer on demand.

EXPERIENCE, CONTINUED

2024 – 2025 · Remote

The consulting firm behind The Funded Trader and more than a dozen other prop firms.

AI Productivity Engineer

Oct 2024 – Jul 2025

- The in-house AI tool-builder: automations, workflows and custom solutions for teams across every department.
- Covered productivity, project management, content marketing and content management, up until the group wound down.

Content Manager

Apr 2024 – Oct 2024

- Calendars, channels and releases across every prop firm under Easton's management.

2022 – 2024 · Remote

A forex prop firm that grew into one of the biggest of its era.

Content Manager

Apr 2023 – Apr 2024

- Owned everything TFT published across its social channels, calendar to release.
- Grew the YouTube channel from zero to 100k subscribers.

Lead Video Editor

Oct 2022 – Apr 2023

- Ran a team of four to six editors and held the quality line on both the edit and the design.

Senior Video Editor & Graphic Designer

Apr 2022 – Oct 2022

- Cut nearly everything the firm put out, plus the design around it. Rewatching every video taught me the business from the inside.

SKILLS

Agentic workflows & automations

Agentic workflows end to end: agents and subagents, multi-agent orchestration and handoffs, bounded loops and guardrails. Automations that run unattended, and the tooling around them: CLI tools, MCP servers, structured outputs.

Models & harnesses

Agent harnesses and coding agents (Claude Code, Codex), frontier and open-weight models, self-hosted models, parallel agent runs, scheduled automations.

Languages

TypeScript day to day, Python or Rust when the problem calls for it.

Context & retrieval

Context engineering, RAG with hybrid search, knowledge bases, source-cited answers, agents fired from Slack, GitHub, CLI and voice.

Product engineering

UI/UX and interfaces, backend and databases, APIs and integrations, realtime and community, dashboards and internal tools, data and analytics, auth, deploys and infra.

PATH

FIRST

Creative direction

Years of creative direction, running a video team of up to six. Where the obsession with how things look and feel started.

THEN

Learned to build

Got tired of handing ideas off, so I learned to ship them myself, frontend to backend.

NOW

AI engineer

I build full products end to end. UI/UX I still obsess over, with agents and an AI-native workflow doing the rest.
